PROFESSIONAL SUMMARY

Backend-focused Software Engineer with 6 months of hands-on experience in building secure, scalable, and production-ready web applications. Expertise in authentication systems, session management, JWT, RBAC, RESTful APIs, and full-stack development using the MERN stack. Strong focus on security best practices, rate limiting, data integrity, and performance optimization.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python
- **Backend & APIs:** Node.js, Express.js, REST APIs, JWT Authentication, RBAC, MongoDB, PostgreSQL, MySQL
- **Frontend:** React.js, Next.js, Tailwind CSS, Responsive Web Design
- **Tools & Others:** Git, GitHub, Postman, Vercel, Render, Cloudinary, API Optimization, System Architecture

PROFESSIONAL EXPERIENCE

- **Software Developer Intern** Feb 2025 – Aug 2025
Tosscoll Pvt. Ltd. *India*
 - Contributed to the development of 3 production platforms (NGO Management System, Partner Portal, and LMS) supporting 20+ active users, 2L+ donations, and 15+ partner transactions.
 - Designed and implemented secure wallet systems, RBAC dashboards, payment integrations, and reporting modules, reducing manual reporting effort by 15–20%.
 - Developed backend modules for course workflows, transaction processing, and data pipelines, improving operational efficiency and system performance by ~15%.
 - Optimized APIs and database queries, enhancing data consistency and overall application responsiveness.

PROJECTS

- **BrickNest Estate App (Full-Stack MERN)** LINK
 - Developed a production-grade real estate platform with secure JWT authentication (access + refresh tokens), HTTP-only cookies, and database-backed session management featuring token rotation, device tracking, and logout-all functionality.
 - Implemented a robust OTP-based password reset system with hashing, 5-minute expiry, attempt limiting (max 5), rate limiting (1/min, 5/hour), and activity logging (IP & user-agent) for enhanced security.
 - Built scalable property listing system supporting 500+ listings with AI-powered natural language search, advanced filtering, pagination, favorites, and Cloudinary + Multer integration for multi-image uploads with automatic cleanup.
- **Banking Management System (Backend API)** LINK
 - Designed and implemented a ledger-based banking backend capable of processing 1000+ transactions using immutable debit/credit entries to ensure data consistency and accurate real-time balance tracking.
 - Implemented idempotent transaction processing and JWT authentication to prevent duplicate transactions and enhance system reliability under concurrent requests. Developed modular REST APIs for account management, fund transfers, and transaction history with comprehensive input validation and security measures.

- **Face Recognition Attendance System**

LINK

- Developed an AI-powered face recognition attendance system supporting 100+ facial samples per user with optimized preprocessing and feature extraction pipelines.
- Achieved ~95% recognition accuracy using Haar Cascade detection under controlled environments.
- Automated attendance marking and report generation in CSV/Excel format, reducing manual effort by approximately 80%.

CERTIFICATIONS

- Python Programming – SEED IT, July 2022
- MERN Stack Development – SEED IT, August 2025

EDUCATION

- **B.Tech (Hons.) in Computer Science & Engineering**
Chhattisgarh Swami Vivekananda Technical University

May 2024
CGPA: 8.2
