

Aakash Kashyap

Backend-Focused Software Engineer — MERN Stack — REST APIs — JWT — RBAC — Security

+91 77109 27857 | aakashkashyap.dev07@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Backend-focused Software Engineer with 6 months of hands-on experience building secure, scalable, and production-ready web applications. Proven expertise in authentication systems, session management, JWT, RBAC, and RESTful API design using the MERN stack. Demonstrated ability to deliver measurable impact across NGO management, partner portal, and LMS platforms serving 20+ active users. Strong focus on security best practices, rate limiting, data integrity, and performance optimization.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python

Backend & APIs: Node.js, Express.js, REST APIs, JWT Authentication, RBAC, Session Management, Rate Limiting

Databases: MongoDB, PostgreSQL, MySQL

Frontend: React.js, Next.js, Tailwind CSS, Responsive Web Design

Tools & Platforms: Git, GitHub, Postman, Vercel, Render, Cloudinary, Multer, System Architecture

PROFESSIONAL EXPERIENCE

Web Developer Intern

Feb 2025 – Aug 2025

Tosscoll Pvt. Ltd.

- Contributed to 3 production platforms (NGO Management System, Partner Portal, and LMS) supporting 20+ active users, 2L+ donations, and 15+ partner transactions.
- Designed and implemented secure wallet systems, RBAC dashboards, payment integrations, and reporting modules, reducing manual reporting effort by 15-20%.
- Developed backend modules for course workflows, transaction processing, and data pipelines, improving operational efficiency and system performance by approximately 15%.

PROJECTS

BrickNest Estate App — [Live Link](#) (*Full-Stack MERN*)

- Engineered a production-grade real estate platform with secure JWT authentication (access + refresh tokens), HTTP-only cookies, and database-backed session management featuring token rotation, device tracking, and logout-all functionality.
- Implemented a robust OTP-based password reset system with hashing, 5-minute expiry, attempt limiting (max 5), rate limiting (1/min, 5/hour), and activity logging (IP & user-agent) for enhanced security.
- Built a scalable property listing system supporting 500+ listings with AI-powered natural language search, advanced filtering, pagination, favorites, and Cloudinary + Multer integration for multi-image uploads with automatic cleanup.

Banking Management System — [GitHub Link](#) (*Backend API*)

- Designed a ledger-based banking backend capable of processing 1000+ transactions using immutable debit/credit entries to ensure data consistency and accurate real-time balance tracking.
- Implemented idempotent transaction processing and JWT authentication to prevent duplicate transactions and enhance system reliability under concurrent requests.
- Developed modular REST APIs for account management, fund transfers, and transaction history with comprehensive input validation and multi-layer security measures.

Face Recognition Attendance System

- Developed an AI-powered face recognition attendance system supporting 100+ facial samples per user with optimized preprocessing and feature extraction pipelines.
- Achieved approximately 95% recognition accuracy using Haar Cascade detection under controlled environments.
- Automated attendance marking and report generation in CSV/Excel format, reducing manual effort by approximately 80%.

EDUCATION

B.Tech (Hons.) in Computer Science & Engineering

Chhattisgarh Swami Vivekananda Technical University

May 2024

CGPA: 8.2

CERTIFICATIONS

- Python Programming – SEED IT, July 2022
- MERN Stack Development – SEED IT, August 2025
